Adding Product Codes and Key Words

Ensuring that your company registers under the product and service codes that match your capabilities is one of the most important aspects of completing the questionnaire.

The product and service codes are the primary means for buyers to source suppliers and/or contractors to match their contract requirements.

It is essential to give careful consideration and allow adequate time to review all of the available product and service codes and keywords, in order to maximise your company's chances of being identified by a buyer for a relevant contract opportunity.

How to select product and service codes for your organisation

This guide provides all the product and service codes and their associated keywords.

There are four tiers in the coding structure which are divided into the following areas:

1. GENERAL BUSINESS PRODUCTS
2. GENERAL BUSINESS SERVICES & WORKS
3. SECTOR SPECIFIC PRODUCTS
4. SECTOR SPECIFIC SERVICES & WORKS

Each area is divided into subsections, listed on p.5.

Navigating through the Product Code tree structure

In the system, to select your organisation's product codes, you will need to navigate through a tree structure:

- Level 1 – the highest and most general category. Picking a level 1 code will then display all the available level 2 codes.
- Level 2 – subcategories giving a greater level of detail. Picking a level 2 code will then display all the available level 3 codes.
- Level 3 – individual products and services – this is the level to choose to indicate what products and services your organisation can supply.
- Level 4 (keywords) – further division of the individual products and services to give a greater level of granularity– this may help buyers identify suppliers who provide a particular type of the level 3 product or service.

Example – how to use keywords

1.1.32.0 Lifts & Escalators

Keywords:

1.1.32.1 Lifts - Passenger

1.1.32.2 Lifts – Wheelchair

The keywords clearly enable suppliers to demonstrate the specific type of lifts and escalators they can provide (you can select one or all of the keywords as appropriate).
